FALL PROTECTION

OSHA'S #1 Most Cited Standard 2023

Falls are among the most common causes of serious work-related injuries and deaths. Employers must set up the work place to prevent employees from falling. There are a number of ways employers can protect workers from falls, including through the use of conventional means such as guardrail systems, safety net systems and personal fall protection systems, the adoption of safe work practices, and the provision of appropriate training. **Are you in Compliance?**
